## STRUCTURAL ANALYSIS - II

(2012 Course) (Semester - I)

Time : 2½ Hours]

[Max. Marks :70

Instructions to the candidates:

- 1) Answer questions Q1 or Q2, Q3 or Q4, Q5 or Q6, Q7 or Q8.
- 2) Figures to the right side indicate full marks.
- 3) If necessary, assume suitable data & indicate clearly.
- 4) Use of electronic pocket calculator is allowed.

- Q1) a) Analyse the beam by slope deflection method. Draw BMD & SFD. Take  $EI = 3900 \text{ kN-m}^2$ . The support 'B' sinks by 30mm. [10]

- b) Analyse the continuous beam shown in figure using flexibility method & draw the bending moment diagramme. [10]

OR

P.T.O.

- Q2) a) Analyse the frame as shown in figure. EI is constant. Use slope deflection method. [10]

- b) Analyse the continuous beam shown in figure by moment distribution method. Draw BMD & SFD. [10]

- Q3) Analyse the beam shown by stiffness matrix method. Draw BMD & elastic curve. EI = constant. [16]

OR

Q4) Analyse the frame by stiffness matrix method & sketch BMD. [16]

Q5) a) Determine the approximate values of moment, shear & axial forces in member of the frame loaded & supported as shown in figure using cantilever method of analysis. [12]

b) A simply supported beam of length 6m is loaded as shown in figure. Determine the maximum deflection. [6]

OR

- Q6) a)** Analyse the frame as shown in Q.5 (a) by portal method. [10]
- b) The beam is loaded & supported as shown in fig. Determine deflection at nodal points. Take 3 nodes. [8]

- Q7) a)** Explain the terms: [8]
- Constant strain Triangle.
  - Linear strain Triangle.
  - Higher order elements.
  - Nodes. [www.sppuonline.com](http://www.sppuonline.com)
- b) Explain shape function for Quadratic rectangular element. [8]

OR

- Q8) a)** Explain shape function & state properties of shape function. [8]
- b) Differentiation between Axisymmetric & Isoparametric elements. [8]
