B.E. (Civil) (Semester - I)

D: EARTHQUAKE ENGINEERING

(2008 Pattern) (Elective - II)

Time : 3 Hours]

[Max. Marks : 100

Instructions to the candidates :

- 1) *From Section - I Answer Q.1 or Q.2; Q.3 or Q.4; Q.5 or Q.6 and from Section - II answer Q.7 or Q.8; Q.9 or Q.10; Q.11 or Q.12.*
- 2) *Answers to the two sections should be written in separate answer books.*
- 3) *Figures to the right indicate full marks.*
- 4) *IS 456, IS 1893, IS 13920 are allowed in the examination.*
- 5) *Neat diagrams should be drawn wherever necessary.*
- 6) *If necessary, assume suitable data and indicate clearly.*
- 7) *Use of electronic pocket calculator is allowed.*

SECTION - I

- Q1)** a) What are the causes of earthquake? Explain with neat sketches the Elastic Rebound Theory? [6]
- b) Classify and describe with suitable sketches, different types of waves generated by an earthquake? [6]
- c) Describe the difference between magnitude and intensity of an earthquake? [4]

OR

- Q2)** a) What are the lessons learnt from past earthquakes? Explain philosophy behind earthquake resistant design of structures? [8]
- b) Explain the interior of the earth with neat sketches? Classify the earthquakes based on different parameters? [8]
- Q3)** a) What are different types of vibrations? Define natural frequency, Natural time period. Natural circular frequency and Damping ratio. [8]
- b) Explain with examples, Over damped system, critically Damped system and Under damped system giving example of each for free but damped SDOF. [8]

OR

P.T.O.

- Q4)** For the two degree freedom system shown in Figure 4.1, obtain natural frequencies and amplitude ratios. Assume $K = 20\text{kN/m}$. [16]

Figure 4.1

- Q5)** Determine the design eccentricity in Y-direction for a three storey building as shown in Figure 5.1. The total seismic weight /floor = 450 kN. The column size = 400mm × 600 mm. Assume grade of concrete = M25. [18]

Figure 5.1

OR

- Q6)** Determine lateral forces at different storey levels for a plan of three storey school building as shown in Figure 6.1. Assume D.L. = 5kN/m^2 , L.L. = 4kN/m^2 on each floor and 1.5kN/m^2 on roof. Assume floor height 4m for ground and 3m for remaining storey with soil type hard and seismic zone IV. [18]

Figure 6.1

SECTION - II

- Q7)** a) What is the necessity of ductile detailing? Explain with neat sketches the detailing for flexural member as per IS 13920(1993). [9]
b) What is liquefaction of soil? Explain the effects and various methods to reduce the effects of liquefaction? [9]

OR

- Q8)** a) Define the shear wall and its classification? Describe the structural behavior of shear wall? [9]
b) What is Base Isolation? Explain energy dissipation devices to improve earthquake resistance of buildings? [9]

- Q9)** a) What is strengthening and retrofitting? Explain in brief the techniques for retrofitting of traditionally build constructions? [8]
b) Explain the terms active and passive control system? What are different types of steel frames used in earthquake prone areas. [8]

OR

- Q10)** a) Explain Tuned Mass Dampers? [8]
b) Explain various techniques for local retrofitting of RC buildings? Give reasons for poor performance of masonry buildings? [8]

- Q11)** a) Describe global retrofitting techniques for RC buildings? [8]
b) A 400mm×600mm column is reinforced with 14 nos. of 16mm dia. Bars. It is supported on an isolated footing. The load coming on footing is 1500kN and a moment 20kN.m. The SBC is 20kN/m². Using M25 grade of concrete and steel grade Fe250, design footing and sketch the details. [8]

OR

- Q12)** Write notes on : [16]
a) Seismographs.
b) Irregularities in buildings.
c) Response spectrum analysis.
d) Load Resisting systems as per IS 13920.
