B.E. (Mechanical)

b - MACHINE TOOL DESIGN

(2008 Pattern) (Elective - II) (Semester - I)

Time : 3 Hours]

[Max. Marks : 100

Instructions to the candidates:

- 1) *Attempt any three questions form each Section - I and Section - II.*
- 2) *Answer to the questions should be written in separate books.*
- 3) *Draw neat diagram wherever necessary.*
- 4) *Assume Suitable data if required.*

SECTION - I

- Q1) a)** Design a six - speed gear box for a machine tool having a minimum speed 60 rpm. G.P ratio = 1.55, speed of motor = 1500 rpm. Draw the best possible Structural diagram, ray diagram, speed chart and gear layout. **[14]**
- b) Discuss the selection of motor for the drive. **[6]**

OR

- Q2) a)** Explain why cis used for calculating speed? Show value of geometric progression.lies between 1 and 2. **[8]**
- b) Discuss the designs features of feed gear box with Norton drive. **[8]**
- c) Write a Short note on selection of best Ray diagram. **[4]**

- Q3) a)** What the design criteria for beds? How these are applied to for welded and cast beds. **[8]**
- b) Why stiffness is important consideration in machine tool structure? How stiffness is improved explain with figures. **[7]**

OR

P.T.O.

- Q4)** a) What are the functions of machine tool structures? Show the different types of cross sections used for machine tool beds and columns. [8]
- b) Discuss bed materials along with required properties. [7]

- Q5)** a) Estimate the total error in pitch of a lead screw working on sliding friction and show that it could be expressed as [10]

$$\Delta_1 \left(1 + \frac{P^2}{2\eta D^2} \right) \text{ Where } \Delta_1 = QP / AE \text{ Q - Axial load, P - Pitch,}$$

A - Cross section area, D - Effective diameter, η - Efficiency.

- b) Write a note on aerostatic slide ways. [5]

OR

- Q6)** a) Discuss briefly the merits and demerits of Recirculating power screw in comparison to conventional lead screw. State its specific field of uses and application. [7]
- b) Discuss the design consideration in guideways. [8]

SECTION - II

- Q7)** a) Explain the design consideration of machine tool spindle. [8]
- b) Explain different methods for preloading of ball bearing. [6]
- c) Describe the different types of bearing employed in machine tools. Give the importance of each. [6]

OR

- Q8)** a) Describe the various elements of a spindle unit used in a drilling machine. Draw the neat sketch of the arrangement. [7]
- b) Explain optimum spacing of support in spindle for good rigidity. [8]
- c) State and explain the functions of machine tool spindle. What are the desirable features of spindle units. [5]

- Q9)** a) What do you understand by regenerative chatter in machine tool? State its causes and effects. [8]
- b) How vibrations of boring bar are damped. [7]

OR

- Q10)**a) Explain how electrical braking system is used for control in machine tool. [8]
- b) Compare hydraulic control system with mechanical control system with reference to performance, cost, reliability considerations. [7]

Q11) Write a short note on following : [15]

- a) Layout of machine tool by matrices
- b) Feed back devices used in CNC
- c) For flat disc drive, derive the equation for frictional torque.

OR

- Q12)**a) Explain how and where a retrofitting is done in a old lathe machine tool. [8]
- b) Differentiate stepped and stepless drive and explain Epicyclic stepless drive. [7]
