ENVIRONMENTAL ENGINEERING - I

(2015 Course) (Semester - II)

Time : 1 Hour]

[Max. Marks : 30

Instructions to the candidates:

- 1) Solve Q1 or Q2, Q3 or Q4, Q5 or Q6.
- 2) Neat diagrams must be drawn wherever necessary.
- 3) Figures to the right indicate full marks.
- 4) Assume suitable data, if necessary.
- 5) Use of logarithmic tables, slide rule, mollier charts, electronic pocket calculator and steam tables are allowed.

Q1) a) What sound pressure level will result from combining following four SPLs : [5]

71 dB, 64 dB, 76 dB and 79 dB.

b) Discuss various sources of municipal solid waste. Also explain sanitary land fill technique for disposal of MSW. [5]

OR

Q2) a) Explain the effect of atmospheric stability conditions on dispersion of pollutants. [5]

b) Enlist various equipments used for control of particulate matter pollution. Also explain with a neat sketch working of Fabric filter. [5]

Q3) a) Enlist methods of population forecast. Explain Incremental Increase method of population forecasting with formula. [5]

b) What are the important requirements of potable water? Also enlist various factors which affect the rate of demand. [5]

OR

Q4) a) Mention various physical characteristics of water. Discuss in detail laboratory procedure for determination of Alkalinity present in water. [5]

P.T.O.

- b) Find out water demand of a town in the year 2041 by Incremental Increase method from the following census data : [5]

Year	1961	1971	1981	1991	2001	2011
Population in thousands	65	68	72	79	89	97

Water is supplied at the rate of 135 lpcd.

- Q5)** a) Enlist various units of water treatment plant. Also mention functions of each treatment unit. [5]
- b) What is principle of sedimentation? Enlist various factors affecting sedimentation. [5]

OR

- Q6)** a) What is aeration of water? Mention various objectives of aeration. [5]
- b) Two primary settling basins 26m in diameter with 2.1 m side water depth. Single effluent weirs are located on the peripheries of the tank. For water flow of 26000 m³/day, Calculate, [5]
- i) Detention period.
 - ii) Volume.
 - iii) Surface area of tank.
 - iv) Overflow rate.
 - v) Weir loading.
